

## **General Guide to Adhesives**

### **SURFACE PREPARATION**

Dreamwalls Color Glass can be mounted to any number of surfaces. The biggest determining factor is to be sure the substrate is prepared adequately for the adhesive you plan to use for installation. Always be sure that the adhesive is applied according to directions and that the substrate is sealed properly according to the manufacturer's instructions.

### **ADHESIVES**

Below are adhesives that have been used successfully with Dreamwalls Color Glass. Always follow the adhesive manufacturer's instructions regardless of the installation method you choose. Please note that Gardner Glass (Dreamwalls) can only recommend these adhesives based upon our testing experience. They have shown excellent adhesion, non-corrosive properties, and no bleed-through or shadowing. Gardner (Dreamwalls) always recommends using a mechanical fastener in conjunction with any adhesive to support the weight of the glass.

- Dow Corning 995 Silicone Structural Sealant (white)
- DAP 100% silicone rubber sealant (clear)

The information above is offered in good faith and is believed to be accurate and up-to-date. However, because products made by other manufacturers are beyond our control, this information should not be used in substitution for customer's tests to ensure that the installation is safe, effective, and fully satisfactory for the intended end use.

Gardner Glass Products, Inc. (Dreamwalls) disclaims any implied warranty of fitness for a particular purpose or merchantability of the above products. Gardner Glass Products (Dreamwalls) disclaims liability for any incidental or consequential damages resulting from the use of any of the mentioned products.
